

A&M Mail Form

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This is a Perl CGI MailForm program that allows you to communicate with the visitors of your home page without publishing your E-mail address on the Web. Your real E-mail address is completely hidden from spammers. This program is using Java Script to display form in a nice popup window. But it works as well even if Java Script is disabled in visitor's browser. This script generates all necessary forms dynamically on the fly.
