

A Nifty Table Searching Script

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This article shows a nifty little script, which, with just one ASP page, allows you to dynamically search a column in a table using a string comparison. This one script can be used over and over due to its dynamic nature. Hopefully this script will save you valuable time by cutting down on the often repetitive task of creating small, searching scripts.
