Mobile Number	{value_mobile_number}
Email	{value_email}

AbleLogger is a PHP4/MySQL program which provides a streamlined interface for logging visits to your website and tracking visitation patterns or specific users. AbleLogger is not intended to be an all-encompassing stats package, rather a tracking tool to provide the level of useful analysis missing in many full-scale stats packages. AbleLogger is best used in conjunction with a full featured stats package that displays things like page views and bandwidth by month, top referers, browser stats, most popular pages, error pages, etc.
