

Access Control by Screen Size

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

With an increasing number of standard screen resolutions in use, it's often necessary to do separate designs for each. This script allows you to control access and redirect to separate pages based on 640, 800, 1024, or larger screen sizes. The script includes optional alert messages, which can be enabled or disabled via a script variable. Thorough instructions are in the script, and set-up is easy.
