Active Asp Uk Postcode Authentity Checker

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This little asp script uses MS XMLParser to check the validity of any UK postcode. It can be easily adapted to be added to forms to stop users progressing without a valid UK Postcode. Ideal for UK webmasters who want to validate their members. This script is recommended for users of the secpay (c) system as it uses their web validation system via an XML call.
