Activedit is a development tool for Allaire ColdFusion Application Server that allows developers to embed a word processor, similar to Microsoft Word®, into a web page. The word processor empowers you with the ability to publish dynamic, formatted pages on the Internet simply by clicking a save button. Activedit can be placed inside a form on a web page, it allows the visitor to type in rich formatted content. It can mimic a HTML textarea. The HTML can then be saved to a database, file, sent in an email, or simply displayed on another web page. Saving the document in a database has some distinct advantages. You can search through all your documents, share your documents with others via an intranet, use the information for future marketing purposes and a slew of other things.
