

Adding Site Registration using SQL Server and ASP

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

One of the most powerful enhancements for any site is to establish community and personalization features. In our new series, we are going to demonstrate how to add community and personalization features to your web-site. The first step to reach this goal is to allow user registration. In this first article, we show you how to add user registration to your site using SQL Server and ASP.
