

Address Management Database (AMS)

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

AMS is an address management system consisting of a perl script and a configuration file for a sql database. Addresses can be searched, mantained and downloaded (CSV, Text-TAB delimited, LaTeX table) from a server via WEB Browser. Supported SQL databases include msql, postgresql, mysql, etc.
