Advanced FileTimer (formerly known as FileTime) is a power user tool for modifying date and time stamps of your files. It can repair incorrect file dates by altering the time and date of selected files. You can use the current time and date settings, set your own time/date or add/subtract days, hours, minutes, and seconds to the original time stamps of files. For example, you can make the time stamps equal with the date your photos were actually taken.
