

Advanced PHP Store Locator

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

It enables users to views your stores on a Google Map, view a Google Street view of a specific location, search by address, search the closest stores to their current location. It also includes a way to organise the stores by categories and provides several ways to customize the display and the available filters. Features: - Google Maps v3 (no API key required). - AJAX powered pagination. - Search stores by address, city or postal code. - Several possible filters (stores categories, max distance). - Distances units in Km or in Miles. - Street view display (as an overlay to save space) - Can detect the users location - Specific marker used to display the user current location. - 2 types of results display (included). - A way to use your own icon as a custom marker on the Map. - Very clean and user friendly user interface.
