Mobile Number	{value_mobile_number}
Email	{value_email}

Advanced Virtual COM Port is the first software of its kind which includes both local and network virtual COM port functions. It can share your real COM ports or create virtual COM ports and connect them with a virtual null-modem cable locally or through the network. You can connect to a shared port and use it just like it is on your machine. Virtual serial ports created by the program look and work the same way real ones look and work.
