A PHP-based easy site generation system that pays particular attention to the graphical aspect and the complete separation from the PHP and HTML code. It is a plug-in based system and all its functionalities are handled by a plug-in. Also template "objects" are handled by a plug-in; it is very easy to add your own custom object in the template. It includes multiple themes and users can switch between them. From version 0.8.9 it includes AlberT-cache caching system. It requires PHP 4.1.0+ (for security). Version 0.8.12 includes a configuration module for site wide configuration settings and MetaBase as DB abstraction layer.
