

# Ajax Chat for FlashChat

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

Use the FlashChat admin panel to administer the chat, since this script is just a skin on an existing FlashChat installation. A user using the Ajax skin can chat with a user using the Flash skin. Thus, users without the latest version of Flash - or for whom Flash runs slowly - can still chat. As the main FlashChat, the Ajax skin supports custom user photos, custom background, and room list and chat avatars. Installation is as easy as uploading three folders - ajax, languages, and templates - to your existing FlashChat installation. No database modifications are needed, and there is no installer needed at all. The Ajax skin for FlashChat works with FlashChat's CMS and forum integrations. Thus, if you have integrated FlashChat with a system like phpBB or vBulletin, you can use this skin. IRC commands like /back and /backtime work with the Ajax skin for FlashChat. Several skins have been ported to the Ajax skin, including Windows XP, Mac OS X, and a few others.
