Ajax Extensible Page

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

A.E.P. is an Ajax framework that is very easy to use with an interface of six functions and these functions allow to build Web pages that are extended at user request from data hidden into the page or taken from external files. Once you have experienced the library you feel obliged to build all your web page in this way, as I do. A short tutorial is provided in HTML and PDF forms. Demos included.
