

AJPopup

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

AJPopup is a versatile and nifty DHTML/JavaScript popup display. It can double as a popup description or navigation popup. AJPopup can be deployed in many different situations such as mouseover popups in image maps to display supplementary information or related links. It can also be added to plain URL anchor links for popup descriptions or additional link options. The latest version fixes the display bug in Internet Explorer 5.0.
