

AlbumOnNet WebControl Suite For ASP.NET

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Professional set of WebControls suitable for creating Online Photo Albums, Slideshows and AdRotators. Run client side in the browser using DHTML techniques, minimizing screen flickering. The controls can also be run server side, i.e. using Postback. AlbumOnNet can create Thumbnail files and is capable of extracting useful information from the image files, including EXIF codes. The information is stored in an editable XML file representing a standard .NET DataSet. All properties and settings for the controls are available in Visual Studio / WebMatrix design mode. Full control on the look and feel, making it a joy to customize the design. Display Album control as Table or as a horizontal or vertical Filmstrip. Server paging possible. DataSource can be set by specifying folder name. The DataSource for a SlideShow can be a folder, a connection to an Album control or manually set in a "Slide collection" directly on the SlideShow control.
