Manage and stream your music on a web server using a browser. AmpJuke is a PHP-script that runs on Linux/Unix using Apache and MySQL. Once installed, AmpJuke can stream music to one or more remote clients (f.ex. PC's) on a LAN and/or the internet. Any program that can handle M3U-playlists (f.ex. WinAmp, Amarok and/or XMMS) can play the streamed music. AmpJuke focuses on intuitive navigation as well as speed. Features include, but are not limited to: - Scan+import of music (MP3, OGG, WMA, M4A and/or APE format). - Random play with various options for "fair rotation". - Upload/download music. - Multiple languages. - Automatic retrieval of cover art using webservice. - Display lyrics for individual songs. - Get external info. about performers/groups. - Themes. - Display related performers using webservice from last.fm. - Use favorite lists to quickly retrieve related music. - Show what's playing using AJAX-technology. - Submit listening statistics to last.fm
