

ArMktime

Address {value_address}

Contact Person{value_contact_person}Mobile Number{value_mobile_number}

Email {value_email}

This class can be used convert a date in in the Islamic calendar to a timestamp value. It works like the PHP mktime function. It takes a list of parameters to represent the different components of a date and time in the Islamic calendar instead of the Gregorian calendar. The class returns a timestamp integer value after converting the date. This class is part of Khaled Al-Shamaa project for PHP and Arabic language: http://www.ar-php.org
