Instantly Translate Standard Podcast RSS to iTunes Specific Tags Conversion To Generate iTunes Complaint XML Syndication Feed. With the release of iTunes 4.9, Apple included the first edition of a long-anticipated XML document type definition (DTD) for RSS 2.0, that will enable access to podcasts. Apple has built podcast support directly into both the software and iPod. Aruntx Publishing has a software solution to easily support a very iTunes-specific DTD format for those who wish to have their podcasts placed on iTunes, a desirable destination for podcasters, although no one is being forced to go there. The perfect server-side solution to "convert-on-the-fly& quot; the existing open standard RSS 2.0 format used by most podcastors and radio stations to the proprietary Apple iTunes syndication media RSS format standard. Translates standard RSS open format to iTunes proprietary format. This is an exquisite hand-chosen luxury gentle blend software, which is a 'must-have', with easy installation, to solve platform translations in a very cost effective manner for easy podcast syndication. The media RSS format used for iTunes has an own invention and the inclusion of Podcast in iTunes catalogue as exclusive to Apple. Apple has used the proprietary XML document type definition (DTD) for its RSS 2.0 in iTunes 4.9 which gives users access to podcasts. Aruntx Software takes a standard consolidated format that is supported by most all vendors and converts into the proprietary Apple iTunes syndication media RSS format for inclusion of Podcast in iTunes catalogue. Perfect for a very busy podcast serving site. All trademarks are the property of respective owners.
