

# ASP 101: Calendar

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

This simple ASP code allows you to create a calendar with today highlighted on your Web site. It lets you choose a day, month, and year to view, and with some minor modification will even put your events onto the page on the proper days. It's browser independent and takes two types of input for date navigation - a form-based and a link-based.
