ASP 101: Hit Counter

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This is a simple page hit counter script. It lets you choose either plain text or a set of images by simply setting the images querystring parameter to true or false. You can cut and paste the code into the page you want the count to appear on or just use it as an include file and place one line of text in the document you want the count to appear.
