This book is for ASP developers who need the facts at their fingertips on a whole range of technologies which are likely to be integral to any ASP application. It is designed to provide an instant reference to all aspects of ASP, and also to the key technologies that the ASP developer needs to know about, including XML, ADO, CDO and ADSI. All examples are provided in both VBScript and JScript. If you're writing an ASP application, this is a book that you will refer to constantly. Topics covered: ASP 3.0 objects and their properties, methods and events, The Scripting objects and all the built-in Active Server components, COM+ Transaction and Message Queuing Services, Data Access with ADO, ADOX and ADOMD, Handling mail with CDONTS and CDO for Windows 2000, Using XML with the DOM, XSLT and XPath, and Indexing and Directory Services.
