

# ASP Authentication Using IP Address

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

This article explains how to control web application access by validating the user's login and password against a database using Active Server Pages. Once validated the IP Address of the user is ensure that the user has access to the database.
