asp calendar

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

calendar() displays a calendar page of the chosen month and year. The function takes a date string as its only parameter. For the current server date to be used, a null must be passed. This is the ASP version of calendar.php. It was a little harder to translate than php-calendar.php, due to the difference in the vbs date functions.
