ASP Companion is a tool designed specifically to decrease the time you spend developing database-driven web sites. With ASP Companion you can generate a complete set of Visual Basic classes and ASP pages for accessing the database in a matter of minutes. ASP Companion frees you from the task of writing detailed code and lets you focus on the true functionality of your application. Allows you to create views (data grids) of the data in the database with the ability to update multiple rows on the same page, sort and group the data by any column, and navigate through the pages. Easily create Visual Basic classes with the methods to view, update and delete records in the database. Also includes powerful components for HTML form processing and simplified database access. An efficient, wizard-style interface allows you to provide information about your project in five easy steps.
