ASP-db is a revolutionary new tool that will change the way people think about publishing databases on the web. Using the current tools and technologies, it takes hundreds, or even thousands of lines of code to create a full featured database browsing interface. With ASP-db, you can just drop in a few of lines of code, and your users can query your database on the web. Currently supported database formats include: MS Access, MS Excel, MS SQL, Oracle, Sybase, Ingres, DB2, Informix, dBASE, Foxpro, Paradox, Btrieve, Clipper, and even Text files.
