

ASP Dynamic Include

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Now! you can server side include in your asp scripts on runtime! What is it? It work like server side including but it does make this different: runtime, you can choose file for including on before including What does it? * It does everything like * One time including for include * Customization for error screen if included file has an error * Runtime including
