

ASP Form to Excel and Mail

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

ASP Form to Excel and Mail is a tool based on ASP scripts that allows to save a submitted form into an Excel file (CSV file) and to send a copy of the submitted data to an email address. The form's data is identified automatically, even the uploaded files! The uploaded files are saved into a folder on the server and optionally are included as attachments in the email sent. ASP Form to Excel and mail is a Dreamweaver extension, so you don't need ASP or HTML coding skills to make it work because all the process can be carried out from the Dreamweaver menu and design view.
