

ASP Login

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

The ASP Login script is a simple script that allows you to create a password protected area off your web site for either a members area or to protect pages that you don't want others to have access too. The script uses a password protected Access Database to store the names of users so you can have as many users as you like as long as they have different user names.
