

ASP.NET Graphical Hit Counter Code

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Create a nice looking hit counter using ASP.NET and MS Access. Very easy to setup and use. This is a pure hit counter, it will count each and every hit. To track hits on a new page, simply add a row to the database and change the query string on the counter code to point to the new database row.
