

# ASP-ODP++

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

ODP++ uses <http://dmoz.org> (Open Directory Project) to retrieve real time data and display it. Unlike other similar scripts, you have full control over the appearance. It has improved built in support for creating niche web directories. It also comes with several plugins for amazon associates, news headlines, etc. You can change every bit of HTML source. It is totally template and module based so that you can decide on the positions of the modules and how they will look like. The modules are: Categories, search box, links, newsgroups, etc. Other features include: SSI Emulation, remote SSI, remote html clipping, custom plugin API and plug and run library modules. (Requires perlscript).
