

# ASP Server Object

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

The Server object provides access to properties and methods on the server. Much of functionality it provides is simply functionality the web server itself uses in the normal processing of client requests and server responses. In this tutorial the syntax, properties and methods of the ASP Server object are described.
