ASP Session Transfer across domains

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

You may have a situation where you have two ASP websites, which could be on different servers, and you need to pass a visitor from the first site to the second site, whilst retaining all the session variables. This is the purpose of the XSess Session transfer script. Note: session array objects are not transferred. The session variables are passed in the querystring, and are encrypted to protect the confidentiality of the contents of the session variables. XSess consists of a function, and a few supporting functions, contained in an include file.
