ASP Template

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

ASP Template is a library that enables software engineers to write ASP code without embedding it into HTML pages. With ASP Template you write the code and reference special tags that are inside your HTML templates. All HTML templates can be directly designed by web designers and every place where dynamic content should go can be referenced by putting a simple text tag. If you already worked with PHPLib under PHP you know what I mean.
