

ASP Validated RSS Feed Script

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

With Internet Explorer 7, RSS feeds are tightly woven into the browser. If you have products or other content to provide site visitors they can subscribe to it with one click! This is a great way to sell your products online and provide sticky content to visitors to keep them in the loop of your product and service updates. This configurable ASP RSS script allows you to easily add RSS feeds from a database to your ASP-based website. It comes with an Access database with sample data. This data is used in our own RSS page. Easy to configure, it creates a validated RSS feed. Uses ASP 3.0 and a sample Access database.
