NEW VERSION, 15x faster than 1.0.06! ASPCanvas is a VBScript class that can be included into a project to add GIF support to any application. It requires NO server-side installation of COM objects, the only thing you have to upload is this script to the web server, and it produces GIF files of any size. A suite of drawing functions are included in the class. This script will even work on Brinkster's free servers.
