

AspLib - TabControl

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

TabControl is a flexible component for building tabbed interfaces in ASP.NET applications. Each tab represents a separate page which can be displayed in IFrame or DIV Panel. Tab design setting are available. A tab can be text and (or) a picture. TabControl can contain several rows. Selected tab can be changed throughPostBack. Control tabs' orientation can be top, bottom, left and right. The control features integrated server-side & client side API.
