Aspose.Imaging for Java is an easy-to-use, high-performance and well-documented imaging library, that provides the most flexible group of routines for the developers to create, manipulate, save and convert images in their Java applications with ease and performance. Aspose.Imaging provides features that go beyond the native capabilities of the development platform. It works independent of other applications, and although Aspose.Imaging allows you to save to Adobe PhotoShop® format (PSD), you do not need PhotoShop on the machine. Aspose.Imaging for Java is flexible, stable and powerful. It's many features and image processing routines should meet most imaging requirements. Common Uses • Create images from scratch • Load and edit existing images • Export images to a variety of formats • Draw images using basic functionality like manipulating the pixel information • Draw images using advanced features like Graphics and GraphicsPath
