

Auto-centering Popup Window

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Use this practical DHTML script to not only open up links in a secondary popup window, but one that's centered in the middle of the user's screen. Browsers other than NS 4+ or IE 4+ will still open the window, only that it won't be centered.
