Auto Tweet Script

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

The Auto Tweet Script is a php script you can use to automatically send your messages to Twitter every day, while you're away from your computer. You can create an unlimited number of these automatic tweets and send them out on auto schedule. Through the message archive in the script admin panel, you will always have the full control over all sent Twitter messages and its status. The script comes including a Tinyurl feature to easily make your URLs short for posting it within your tweets and it supports special characters as well as non-latin characters. So sending tweets in another language than english is no problem for the script. With this easy to use script you can sit back and relax and give your Twitter followers great content, while you're away. NEW: Works with the new OAuth login process of Twitter.
