A truly unique and advanced perl program that will automatically upload photos and generate the accompanying thumbnails to a script generated subdirectory of a website gallery directory. It will then generate the thumbnail gallery page with links to the big images, and will also place a link to the thumbnail page on the gallery home page. In the process, a specific delete script for each gallery is created that when run will automatically delete all photos uploaded as well as the gallery page and the link. Everything is done automatically, requires no work for the webmaster after setting up the initial script.
