BackLinkBot Links Exchange New system for governing reference. The Change from many other systems in that that work begins with checking the search systems, but already with got reference to lead work. This allows first, get the maximum amount known search systems references (available work with 4 russian-language and 4 english systems), secondly, then and there check them on presence of the reference to your resource, in third check their rating in Google and Yandex and give on page, which check these systems. The Secret in that that subscripting occurs for each system in miscellaneous time and the gross amount of the references can grow before 400% if substitute the miscellaneous an search system references with the other search system. Besides, you may themselves adjust the issue a result, as well as get the new references by means of built-in links exchange. Functioning BackLinkBot is founded on PHP 4+ and is reconciled for all last systems of the optimization of the code
