

Batch image processing using AspJPeg asp component

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This simple little script uses FSO, ASPJeg (persits.com) asp component and basic coding to batch process any number (well ok I've tested this on a directory of 200 images of avg size 125kb/Jpg) of jpg images. This script grabs the image name, the file path of the image and detects the size of the image (with options to limit the size by height or width) and then resizes the image and saves it on itself. Very simple little script, effective and well commented.
