Beautify PHP

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This program tries to reformat and beautify given PHP source code files automatically. Basic features: automatic indentation of PHP source code according to given number of spaces; automatic newlines, if required; includes settings for braces according to C or PEARL style; can make use of PHPs integrated code highlight option; can limit number of chars per line.
