

Binding Client Side Controls Dynamically to an XML Data Source Object

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

The XML data island in IE 5.x provides a simple and convenient way to dynamically alter the content of a Web page using data stored either locally or remotely in XML format. This article demonstrates how to change the data content of your Web application pages client side through the use of DHTML events and dynamic data binding with XML island DSOs, and helps you decide in what format the XML should be saved.
