The software allows the user to generate a given number of Bingo cards which can then be printed or viewed at any time. In game mode, the software generates random Bingo numbers and displays a list of winners and numbers drawn. Version 1.3 update: completely web-based configuration, entirely customizable winning patterns, context-sensitive help, new manual draw mode for people who want to use an external draw mechanism, ability to change the number of cards in play once a set is generated.
