Book 'em Dan-O is an access logging script which was written by Spider. He explains, "Let's face it, most of the statistics you get from server logs are full of irrelevant garbage. Book 'em, Dan-O is a readily configurable, easy way to log the time of the visit, the visitor, where they came from (when used as a SSI), and what browser they were using. All great data to better refine your site! Dan-o is configurable as a Server Side Include or as a "re-direct," and includes ability to exclude yourself from being logged.
