Specifically designed for JavaScript Junkies, jsView is an image display applet that supports an unlimited number of images. Images are dynamically loaded into the applet via JavaScript calls, on demand, eliminating typically long start-up loading times. As each new image is first loaded, a positionable active "Loading..." meter appears, holding visitor attention and displaying status. Each image link and target is individually programmed dynamically from the JavaScript call, as well. The jsView applet features optional image AutoSizing, a fast-loading 8.6K class file, and a truly superb set of demos and documentation included in the free download. Both free and professional versions are available.
