

# Building your first JSP custom Tag

<b>Address</b>	<code>{value_address}</code>
<b>Contact Person</b>	<code>{value_contact_person}</code>
<b>Mobile Number</b>	<code>{value_mobile_number}</code>
<b>Email</b>	<code>{value_email}</code>

Tags are reusable code libraries and allow easier separation of HTML and Java code. This tutorial first introduces JSP custom tags and then moves forward to build a simple JSP tag. Every step has been explained in detail. Online demo available.
