

Calculating the remainder of a subscription time in PHP

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

To calculate the remainder of a subscription time in PHP we need three items: the end date from the future in timestamp format, the current date in timestamp format, and a function to convert the difference between the two from seconds into days, months and maybe even years.
